## Rope Dogs

RR025

Rope Dogs are a more forgiving, safer substitute for a mechanical rope clamp in situations where overloading could damage the rope sheath. Used primarily in rope tensioning systems (e.g. cableways), a Rope Dog will slip in a controlled manner, limiting the forces applied and preventing system overload.

Designed to be off-loaded and re-loaded under tension. Correct installation of the Rope Dog is imperative; training and instruction can be provided on request.

### Specs:

- Sewn terminated eye
- Works on 10.5mm - 12.5mm diameter rope
- Made from 11mm low stretch rope
- Individual serial number per set
